

### 7. How can I print out all the Property Profiles in the group, rather than just the one I see on the screen?

It is possible to print out only the single Profile you are viewing on the screen by selected File and then Print. But to print out all the Property Profiles in a group you are working on, you need to format them as a report. Select Report, then Select Report, and then choose Property Profile. Press Preview. After a few seconds of waiting, the Printer icon will appear at the top of page and you click on it to print out the entire group of Profiles.
